Inspiration of the Week

How the right trade policies can empower women

“Trade can benefit women and girls in a variety of ways, but only if the right policies are put into place

Free and open trade plays an important role in economic growth and development, delivering better jobs, incomes, skills and many other benefits. With appropriate and efficient trade policies, these gains can contribute to other development outcomes and support the Sustainable Development Goals, particularly gender equality and women’s economic empowerment.

The nexus between trade and gender is, however, complex and multidimensional. It involves a range of social, economic and cultural issues, and is conditional on sectors, jurisdictions, and individual socioeconomic and education levels.”
